Bloomberg Tax & Accounting Projects 3.2% Inflation Increase for 2027 U.S. Tax Rates

The annual projections incorporate updated tax brackets, deduction limits and OBBBA-driven adjustments, giving tax professionals an early view of key thresholds for 2027 tax planning.

By **Ankit Kankar** | September 13, 2026

The report accounts for several new adjustments made under the One Big Beautiful Bill Act (OBBBA) that affect tax planning for taxpayers in 2027 and beyond. For corporate taxpayers and passthroughs, they include an adjustment to the employer-provided child care credit, initially enhanced by the OBBBA. It also includes an adjustment to the threshold for information at source reporting requirements, which was initially increased by the OBBBA. For individuals, the report includes varied income tax rates with steeper adjustments for lower brackets.

"Tax professionals are being asked to make consequential planning decisions amid constant policy change and growing complexity," said Evan Croen, head of Bloomberg Tax & Accounting. "By providing trusted projections before official figures are released and carrying those updates directly into the tools where professionals work, we can help them move from information to action sooner and spend more time applying their expertise to the decisions that matter most."

The updated rates flow directly into Bloomberg Tax's innovative software solutions including Bloomberg Tax Provision, Bloomberg Tax Fixed Assets, and Bloomberg Tax Workpapers. This is an example of the power and efficiency of Bloomberg Tax & Accounting's integrated suite of solutions, which modernizes the corporate tax process, from data collection to tax calculations that power key deliverable.
