[Intellectia.AI](#) announced the global release of its upgraded AI-driven stock trading architecture, introducing one-click copy trading across its core equity strategies. Live globally at Intellectia.AI, the updated platform connects algorithmic quantitative models directly with brokerage execution, allowing retail investors to mirror high-conviction stock signals in real time.

Copy Trading Built Around Proprietary AI Stock Strategies

At the center of the platform update is the integration of direct Copy Trade execution across Intellectia.AI's primary stock strategies:

AI Stock Picker: Generates pre-market stock selections optimized for daily momentum. Investors can copy daily AI-selected top stocks with defined entry zones before the market opens.

SwingMax: Delivers real-time swing trading signals based on volume-to-price relationship models, providing automated entry targets and staged profit-taking alerts.

Daytrading Center: Captures intraday trend reversals, technical breakouts, and pivot bottom opportunities, offering high-frequency signals for active market sessions.

"Translating complex algorithmic analysis into disciplined trade execution has historically been a barrier for everyday traders," said Chen, the founder and CEO at Intellectia.AI. "By combining our AI quantitative strategies with one-click copy trading and automated monitoring, we are making professional-grade execution accessible to both beginners and experienced market participants without sacrificing transparency or control."

Autonomous AI Tasks, and Brokerage Connectivity

Beyond passive strategy mirroring, Intellectia.AI introduces **AI Tasks** for continuous automated market monitoring. Users can assign background tasks via natural-language prompts—such as tracking specific portfolio holdings, scanning for technical pattern breakouts, or alerting when a strategy meets target risk parameters.

To maintain direct execution capability, Intellectia.AI supports API connections to leading retail brokerages, including Robinhood and Webull, allowing users to execute strategy signals through their existing brokerage accounts.

Intellectia.AI's updated stock copy trading features and AI workspace are live globally starting today. Investors can test the trading modules at [Intellectia.AI](#).
