Ramp Partners With AWS to Bring AI-Powered Finance Automation to AWS Marketplace

Strategic collaboration gives AWS customers access to Ramp's integrated finance platform, including corporate cards, expense management, procurement, bill payments and AI-powered financial controls.

By **Ankit Kankar** | September 13, 2026

Ramp announced a strategic collaboration agreement (SCA) with Amazon Web Services (AWS) and its availability in AWS Marketplace. Together, these give AWS customers a faster path to modernize finance operations with Ramp's AI-powered platform, including corporate cards, expense management, bill payments, procurement, travel, banking, automated bookkeeping, and AI-powered controls.

"Enterprise finance teams are ready for AI to take manual work out of the back office, but they need a practical path to adoption," said Guy Cartwright, VP, Channel Sales at Ramp. "This collaboration helps customers bring more automation and control into finance operations without adding friction for their procurement or IT teams."

AI-enabled finance for the agentic era

The collaboration puts Ramp's AI agents to work inside that platform, coding expenses, enforcing policy, and processing invoices around the clock, so finance teams get continuous automation without losing oversight. Every action remains auditable, reversible, and bound by enforceable financial guardrails.

Two capabilities are particularly relevant for customers scaling AI workloads. Ramp Stack is an AI platform for accounting firms that encodes a firm's methodology into repeatable, agent-driven workflows, enabling faster closes with a complete audit trail. Ramp AI Token Spend Management gives finance and engineering teams real-time visibility and control over LLM and AI API costs, so spend on AI infrastructure scales with intention, not by surprise.
