Roboteon to Showcase Multi-Vendor Robotics Orchestration Platform at Automate 2026

Live Demonstrations in Chicago to Highlight Interoperability Across AMRs, Picking Cobots and Enterprise Systems for Smarter Warehouse and Manufacturing Automation

Roboteon, the leading innovator in intelligent warehouse and manufacturing robotics software, announced that it will hold live demos at the Automate 2026 show June 22-25 that showcase the advanced capabilities of its software platform across multiple OEMs for Autonomous Mobile Robots (AMRs) and robotics pick arms (Cobots).

The booth (N19019) will highlight Roboteon's powerful robotics orchestration capabilities for warehousing and manufacturing, among many other advanced product features.

"We will be demonstrating what many companies are searching for, which is interoperability and orchestration of processes across different robotic types and vendors, as well human assets," said Raj Senguttuvan, SVP of product at Roboteon.

The advanced Roboteon capabilities that will be highlighted include:

- Rapid integration of robot systems with enterprise software such as WMS, WES, and ERP.
- Certified integration of the Roboteon platform with SAP EWM (Extended Warehouse Management) and Microsoft Dynamics 365.
- Interoperability across robots of different types and from different vendors.
- Advanced capabilities to integrate, manage, orchestrate and optimize robot-enabled warehouse and manufacturing processes.
- A portfolio of configurable execution applications using robots, including piece, case and pallet picking, replenishment, materials movement, line replenishment and many others.
- Innovative use of advanced simulation and digital twins to improve decision-making at multiple time horizons to enhance both planning and execution.
- Broad use of AI and ML technologies across the platform to optimize the release of work to the floor and how it is executed.

These powerful capabilities deliver many benefits to companies, including faster realization of automation strategies, more rapid time-to-value, improved productivity and throughput, and much greater flexibility over time.

Roboteon's booth at Automate 2026 (N19019) in Chicago will feature all these capabilities and more, including integration of AMRs and picking Cobots, each from a different vendor, working together through the Roboteon platform's orchestration engine.
